German Gebrauchsmuster DE 297 14 857 U1 describes an apparatus for shaping a lattice-like radially deformable pipe piece by means of a tongs-like tool. The apparatus includes a shaping body (12) which can be positioned between clamping jaws (92, 94) of the tool (10). The shaping body (12) is approximately tubular and has an axial inner passage (16) with a constant circular diameter. The walls of the shaping body (12) which radially enclose the inner passage (16) are sinuous in the circumferential direction, allowing the walls to be radially deformed and the inner passage (16) to be radially narrowed while maintaining a reduced circular diameter.

The above-identified application discloses and claims an invention patentable over this prior art. Entry of the references above set forth into the file of the above application is believed to be in order and is respectfully requested.

Respectfully submitted,
